Hello

Since the update to SMTP Proxy V2.0.6.1 I had different problems with the filters. First the spamfilter (clamav) was not working anymore (only empty! mails arrived). I had to reinstall NST and ClamAV from scratch to solve this.

Now I realized that the spamtrap filter is not working anymore. It's completely ignored. No entries in the log. I removed and re-setup the filter with no success...

Another thing I saw is that when I test a filter with the "Test with Sample Virus"-Button then the Test filter window shows no output! On the bottom line it only shows "Running..." and then "Filter Finished". Nothing else.

Does anyone else has this kind of problems since V2.0.6.1??
