---

When I perform a Check for Updates using Help - Check for Updates I get error message:

Check for updates operation failed (request failed)

If I check my proxy log I can see where the request has come through from the mail server but it says:

3:21:58 PM PROXY: 3228 xx.xx.x.xx Connection has arrived.(03)

3:21:58 PM PROXY: 3228 Bad URL

3:21:58 PM PROXY: 3228 Blank URL

3:21:58 PM PROXY: 3228 Connection closed

Can anyone help me to get a valid URL in here so that Auto Updates actually works?
