NST! is doing a fantastic job of filtering and killing our (previously) awful spam problem, and I'd like to monitor it's performance closely if possible.

What I would like is a computer-readable version of the Spam Filtering Report that is mailed daily, so that I can write a script to import those totals and produce a graph and various other stats.

Is this possible?

I have tried the SpamLogs utility, but I cannot get it to produce anything.

Thanks,
Jon
