Hello,

I recently changed some settings in the configuration due to an open relay problem.

I decided to configure the server with two IP addresses on the same server.

It was working OK before doing this, but after the change the service does not start.

I have Windows NT 4.0 and the latest version of No Spam Today. When I try to do it manually I also get an error :

No Spam, Today! service could not be started on \\server.

Error 2140: Internal error in Windows NT

(approximately, it is translated from Spanish)

If I restart the computer, the service starts, but does not work properly.

Incoming email does not reach the server and I get an error all the time in the logfile:

("server ip" Valid name, no data record of requested type - closing session

I tried to reinstall software several times with the same result. Does anybody found the same problem?

Thanks.
