Subject: Allow certain addresses to go through

I am having a big problem with messages that are supposed to get through the filters, but aren't.

I have Clam Anti-virus, Attachment Filter and Spam Assassin in my filter list (in that order too) and in the 'Address Patterns to disable filter' box, I have the wildcard domains that I want to allow through without any checking. The messages are still being stopped at the Attachment Check for the MIME error policy.

How can I get this to stop? The support tickets for my provider keep setting NST off and each time I post a support ticket, they get my message and a 550 error from the mail server.
