Hi,

I have been using the free version (10 users) of NST for about 30 days and recently I noticed some spam emails which passed the SMTP filter. All these messages pretend to be from our domain and have FROM field like xxxxx@ourdomain.com. I found all these emails in the auto white list. First I deleted the awl, but after 3 days I saw new entries from which I started to receive spam. What can I do to stop these emails from auto white listing?

Regards,
Peter
