
Subject: Prevent NST from scanning

Hi there,

I'm using the freeware edition of NST for Servers, where in every mail this Freeware-Edition note appears.

Now I have an email account on my mail server which is processed automatically by scripts, and they get confused by this notice.

Since my scripts do not process any mail from foreign senders, I don't need Spam scanning.

Can I configure NST such that it completely ignores mails that are sent to this account? If I type this account's mail address in the "Address Patterns to Disable Filter" field, the Freeware-Edition notice will nevertheless be appended to the mail.

Any hints or ideas (except from buying the full license)?

Thanx,
sd1401
