---

I would be grateful if someone could help me with this problem.

I have set nst to reject and redirect spam to another address and when I use the test button within the proxy admin a test email is sent to the correct redirect recipient.

However this is the only time it works, under normal conditions no spam is redirected and when in the spam assassin admin, when I use the "Test with sample spam" button it doesn't redirect either (it just deletes the email even though nst is definitely set to reject and redirect not delete). I have uninstalled and reinstalled but still no joy.
