
Subject: 550 Recipient rejected

Hello,

I am trying to find out why when my customers send out to some addresses that NST replies with 550 Recipient rejected when the sender in my customer "settings are correct" and the Recipient is a yahoo or other address.

Why would NST stop the mail from going out ? it is not like it is trying to deliver the message to it's own server where it would make sence that it would get rejected.

Thank You
Erick
