One feature I could really use is the possibility to whitelist sending IP addresses fx. 192.168.1.*

Fx if you don't want to block intranet mail originating from fx. scanners and other hardware that doesn't use Exchange (in our case). Fx. we have a scanner that closes the connection after the delay filter, but then we can't scan.

Currently I have added our own domain to the sender whitelist, but this is a problematic workaround since some spammers use your own domain as the sender address.
