I am trying to install the demo and am encountering a vexing issue (Disclosure: I am not a professional techie).

Following the instructions in the FAQs and the forums, I still hit an error message from the NoSpamToday!Admin:

- (receive) connection closed by server - when I test the SMTP port settings:

My setting are as follows:

Incoming IP

Incoming port # 26

The router has been set to switch incoming SMTP traffic from 25 to 26

Outgoing server 192.168.xxx.xxx my mail server address

Outgoing Port Number 25

The NoSpamToday! log shows that is has disconnected with little in terms or error msg or ID#?

I am not able to telnet 192.168.xxx.xx 26 since nothing can go thru NoSpamToday!

This is a plain SBS2003 SP1, ISA is not installed, but Remote Access is. Is this getting in the way?

What did I miss? Thanks for lighting the path! Oli
