Hello...

I am trying NST and it works fine so far... my mayor concern is that for each message NST loads a FULL copy of SpamAssassin and ClamAV...

I downloaded ClamAV for windows and after trying and error I made NST work with Clamd... now it calls the "client" version of the Antivirus (way faster and low CPU load)

SA is another story... I downloaded the windows version of SA... I made the Spamd work in my server... (Spamc.exe / Spamcc.exe work fine on command prompt).. then I tried to create an "External Filter" in NST... but for some reason it does not work... I calls spamcc.exe but it allways returns NO SPAM... well... even if the SA daemon is down... it returns NO SPAM... (really strange)

I tried:

```
c:\progra~1\spamas~1\spamcc.exe -E %OUT%
c:\progra~1\spamas~1\spamcc.exe -E "%OUT%"
c:\progra~1\spamas~1\spamcc.exe -E %IN% %OUT%
c:\progra~1\spamas~1\spamcc.exe -E "%IN%" "%OUT%"
c:\progra~1\spamas~1\spamcc.exe -E %IN%
c:\progra~1\spamas~1\spamcc.exe -E "%IN%"
c:\progra~1\spamas~1\spamcc.exe -E
```
