I've just setup NST. If I go into the SMTP Proxy settings, and try to test the settings, I get the error - 501 invalid email address.

I'm assuming its the redirect email address thats not working, so I've checked the logs of my mailserv and NST has sent " as the email address.

The redirect email address is definately correct - I've even tried clearing it, but it still doesn't work.

Any ideas?

Cheers
