---

I would like to block e-mails by country using DNSBL.. like Amsterdam which is the Netwrlands.. by using DNSBL nl.countries.blackholes.us or nl.countries.nerd.dk  
I added them to the DNSBL after some of the others and they don't seem to be working..

I have a whole bunch of IP's that are getting through.. and when i do a lookup, they say they are from Amsterdam.. I have the beta version running now...

It's seems to be a better performer with the new changes.. NoSpamToday V3.1.2.1

I would like to verify Rev DNS before accepoting mail and also block by country.. we are getting slammed..

Thanks.. GREAT PRODUCT.. I have been using since the beginning....:)
