I've used nospamtoday for a few days now, and I'm thrilled.
However a couple of things I Wouldlike to know, one of which is:

Incomming Messages are apearently changed in the header, propably correct, as the original sending IP is changed to the IP of the NoSpamToday server.

However, my mailservr has further testing, including a large list of banned servers.

Is it possible to keep the delivering IP in the forwarded message, or do i have to extract the banned server/IP list and import it to NST?
