Hello!

Last 4 days nod32 antivirus filter become pass this modifications of virus: Win32/Stration worm. But if i scan this message with Nod32 on-demand scanner that mail is marked as a virus. Reason of various behavior in different settings Nod32 on-demand scanner and nod32 antivirus filter. Standard command line parameters of nod32 antivirus filter is /all /mailbox+ /arch+ .. and if to add parameter /ah (advanced heuristics) nod32 antivirus filter also will detect such viruses.

Best regards,

Testuser
