
Subject: A different problem with statistics

Since upgrading to 2.0.1.4, our statistics are getting reset every day. I think it is happening when my wife and I switch desktops. When I check the log file after opening my desktop, there will be an entry that states

Cannot open file noSPAMtoday_Statistics.csv mode=read (No such file or directory)

but the noSPAMtoday_Statistics.csv file is right there in the program file directory.

In any case, all we can see statistics for are the most recent emails that have just been downloaded. If we switch desktops, the statistics appear to get set back to zero again.

Any suggestions?
