Hi, we are running Nod32 v3.0.684 on our Windows 2003 server with CleanMail v4.0.3.1.

We're trying to configure Nod32 (ecl's) to scan incoming mails for viruses. Command line looks like this:

```
%SCANNER% /base-dir="C:\Program Files\ESET\ESET NOD32 Antivirus" /arch /no-boots /mail /sfx /adware /heur /action=none /log-file=%ERR% %IN%
```

Result is:

...

Aug 25, 2009, 12:57:21 Session 1000: (NOD32 Antivirus) Total: files - 1, objects 2

Aug 25, 2009, 12:57:21 Session 1000: (NOD32 Antivirus) Infected: files - 1, objects 1

Aug 25, 2009, 12:57:21 Session 1000: (NOD32 Antivirus) Cleaned: files - 0, objects 0

Aug 25, 2009, 12:57:21 Session 1000: (NOD32 Antivirus)

Aug 25, 2009, 12:57:21 Session 1000: (NOD32 Antivirus) Filter result is accept/deliver (unknown result)

Emails are delivered no matter if they contain viruses!

Does someone have any idea how to solve this?
