
Subject: Spam filter message initialization failure

I have had two instances where email is returned from MS Exchange with the following:

You do not have permission to send to this recipient. For assistance, contact your system administrator.

<servername.local #4.7.1 smtp;452 4.7.1 Spam filter message initialization failure - client - network: customer@customersemaildomain.com>

If you restart CleanMail Server the problem seems to go away. Has anyone else seen this?

Thanks
Mike
