This line the the local.cf file seems to be doing nothing. This is the actual line in the local.cf file

```
rewrite_header subject    * Rated SPAM by No Spam Today *
```

I want to add the spam score with the "_SCORE_" entry. Is this option only for email that is passed on after being determined to be spam?

The reply email that is sent out for mail rejected as SPAM has simply an "Undeliverable" subject.

Do I need to do something different?

Am I expecting something that I shouldn't?
