Can you help me understandig what's going wrong here?

```
header AAA_HEADER Message-ID =~ /.*/
describe AAA_HEADER  Very basic Header rule
score AAA_HEADER    -0.1
```

```
body AAA_BODY /.*/
describe AAA_BODY  Very basic Body rule
score AAA_BODY    -0.1
```

Now, i can get the AAA_BODY in every message going thru sa, but there is no way to get the AAA_HEADER test to be true, even if i check From, To, Subject, ALL fields.

It seems that the header rule is not checked.

Any help?

thank you
Maurizio
