---

Hi,

I am wondering if anyone knows if the SpamAssassin that is provided with No Spam Today for Workstations is able to learn through the SpamAssassin Coach plugin for Outlook (Express).

This plugin is a very recent effort (developed on Google Summer of Code 2006) to create functionality to be able to teach SA with a click of a mouse.

Read more on <http://sourceforge.net/projects/soc2006spamd/>

I have barely any experience with SA (nor sa learn) and none with the plugin but it sounds like a valuable tool for training SA. Is anyone able to tell me more about:

What ways can be used to teach SA? Only command line?

By the way, I tried to read the manual in PDF but its content turns out totally scrambled on my computer. If the answer I am looking for is in there, is there a HTML version of the manual?

Thanks,  
Ravan
