Hi Folks,

i'm training the bayes filter nearly every week with lots of spam and ham, but i never see any bayes scoring in the filtered messages.

I think NST does not use bayes filtering here, although it is enabled in the local.cf

```
bayes_path      db\bayes
bayes_auto_learn      1
bayes_auto_learn_threshold_nonspam -1.0
use_bayes      1
```

Do i have to create a subfolder named "bayes" in the "db" folder or does this mean that the db files begin with "bayes" ???

Greetings  
Andre

---EDIT

I deleted the bayes database and created a new one. Now the bayes score are shown...
