---

I am getting alot of 'DNS: unknown hosts" on firewall log, coming frm varies

RBL server queries from no spam today. here is one

DNS: Unknown host: '125.178.103.202.sbl.spamhaus.org'

Is there something I need to configure with No spam today?

I have the spam server sending DNS requests to inhouse win2000 DNS server which uses fowarders to DSL router firewall that has a DNS server built in. I could send DNS queries straight out to outside DNS, but I need inside win2000 DNS server for internal name resoultion.

ANy help would be appreciated.

Thanks,

Mike
