
Subject: User_Prefs.cf not read?

Seems that after installing the latest version (2.3.4.1) my user_prefs.cf is being ignored. The score for NO_REAL_NAME is too high for me so I put "score NO_REAL_NAME .2" in my user_prefs.cf and also tried local.cf and restarted the service. I've tried this several times and it has always worked before. What am I overlooking?
