Subject: User\_Prefs.cf not read?

Seems that after installing the latest version (2.3.4.1) my user\_prefs.cf is being ignored. The score for NO\_REAL\_NAME is too high for me so I put "score NO\_REAL\_NAME .2" in my user\_prefs.cf and also tried local.cf and restarted the service. I've tried this several times and it has always worked before. What am I overlooking?
