Hey, I have a bunch of email addresses defined in the local.cf like:

whitelist_from *@joshstarr.com

The problem is, it simply reduces the message scoring by a small amount. I want Spam Assassin to not filter messages FROM these users AT ALL. How can I do that? I want it to simply route the message onward without filtering it at all if it originates from a user defined in the whitelist_from

Any help would be greatly appreciated.

Thanks,
Joshua
