I have made the following settings in the local.cf file:

```
bayes_path      db\bayes
spam_level_char *
spam_level_stars 1
bayes_auto_learn 1
bayes_auto_learn_threshold_nonspam -1.0
bayes_auto_learn_threshold_spam 12.0
use_bayes      1
```

but when i get an email through in the header it says the following:

```
X-Spam-Checker-Version: SpamAssassin 2.63 (2004-01-11) on myserver
X-Spam-Status: No, hits=0.0 required=5.0 tests=none autolearn=no version=2.63
X-Spam-Level:
```

so why does it not say:

```
X-Spam-Status: No, hits=0.0 required=5.0 tests=none autolearn=yes version=2.63
```

I am having mail slip through for the normal viagra crap, yet i also see that the antidrugs ruleset is also installed, well i say it is, the file is in the directory for rulesets. Am I to understand, that by definition if the .cf file is in the ruleset folder it will apply it?

Any help would be great.
