Subject: Whitelist - how?

---

I'm going to make a fool of myself, so please excuse me in advance.

How do I setup the whitelist functions? I want to write an interface back from our mail application (Lotus Notes) ... to add a whitelist entry.

But ... excuse me ... I've looked through the very simple html files provided as some kind of support and they expect you to have a much better understanding than myself.

Any pointers would be greatly appreciated.
