Hello,

Is it possible to create a rule that marks e-mails sent from domain Y always as NON spam IF sent to domain X?

What I've done so far is creating the following rule in local.cf file:

```
#domainX
header DOMAIN_TRUSTED_TO To =~ /domainX\.com/i header DOMAIN_TRUSTED_FROM
From =~ /domainY\.com/i meta domainX_CUSTOM (DOMAIN_TRUSTED_TO &&
DOMAIN_TRUSTED_FROM) score domainX_CUSTOM -8
```

but it doesn't work.

The score of such mails is calculated as follows:

0.2 NO_REAL_NAME From: does not include a real name

0.6 J_CHICKENPOX_21 BODY: 2alpha-pock-1alpha

0.6 J_CHICKENPOX_62 BODY: 6alpha-pock-2alpha

0.6 J_CHICKENPOX_63 BODY: 6alpha-pock-3alpha

0.6 J_CHICKENPOX_65 BODY: 6alpha-pock-5alpha -0.0 BAYES_44 BODY: Bayesian spam
probability is 44 to 50%

[score: 0.4638]

2.7 SUBJ_HAS_UNIQ_ID Subject contains a unique ID

1.6 NO_DNS_FOR_FROM Domain in From header has no MX or A DNS records 0.0

UPPERCASE_25_50 message body is 25-50% uppercase
