Hi there,

I train SpamAssassin by mbox file exported from Thunderbird.

It seems that everything goes very well. But I don't know, where NST keeps this information. If I can copy the db from one server to another one, I don't have to teach all of my NST.

also I want to update from v.2.3.5.2 to v.2.3.5. and I don't know if I have to backup it myself or NST don't overwrite it. I know that local.cf and nospamtoday.cf remain the same. I don't have any extra rules. What should I consider when I update.

I appreciate your help.

thanks

Star-pak
