Hi there,

I'm having problems with the spamassassin.exe cpu load spike, each time a mail is incoming spamassassin.exe goes up to 99% cpu load for about 2-4 sec.

I assume when spamassassin is busy filtering the mail.

It's running on a windows 2000 server with exchange 2000 on a HP Compaq ML350 G2, latest nospamtoday version (2.3.5.7). Attachment, delay & SA filters are turned on.

SA is running got 4 plugins atm:

URIDNSBL

HashCash

DNSBF

ImageInfo

Has anyone got a clue what I could do about this? thnx!
