After evaluating your product for 3 weeks I am noticing that Microsoft Outlook (2000 & 2002/XP) is having trouble seeing the attachment(real e-mail) that is attached to your spam warning/explanation message. Probably 5% of the identified spam is missing the attachment when opened in Outlook. When these same e-mails are opened in Outlook Express the attachment is there. Is this a known bug? The computers used are running Windows XP.
