Just turned on the HostRejectList param. This is great!!

I have a number of customers who do no business outside of the US.

They block all foreign registry IP addresses. This gets rid of alot of SPAM.

It became impossible to do this with the mail server, once we started using NST because the server only sees 127.0.0.1 as the incoming IP address.

One question, though.

It appears that a conversation still takes place, even though the connection is rejected.

When an IP Address is rejected, shouldn't the NST proxy just say "Goodbye" to the connection?

Here's an example...

Jul 17, 2004, 14:14:36 session 0: Connection from 217.129.26.193 accepted

Jul 17, 2004, 14:14:37 session 0: HELO es-217-129-26-193.netvisao.pt

Jul 17, 2004, 14:14:37 session 0: Rejecting all recipients for host/helo  
217.129.26.193/es-217-129-26-193.netvisao.pt

Jul 17, 2004, 14:14:37 session 0: 250 Requested mail action okay, completed

Jul 17, 2004, 14:14:38 session 0: MAIL FROM:

Jul 17, 2004, 14:14:38 session 0: 250 Requested mail action okay, completed

Jul 17, 2004, 14:14:38 session 0: RCPT TO:

Jul 17, 2004, 14:14:38 session 0: Rejecting recipient: baldwin@pc4u.com

Jul 17, 2004, 14:14:38 session 0: 550 Recipient address not accepted

Jul 17, 2004, 14:14:39 session 0: QUIT

Jul 17, 2004, 14:14:39 session 0: 221 Service closing transmission channel

Jul 17, 2004, 14:14:39 session 0: Transmission complete - closing

Jul 17, 2004, 14:14:39 session 0: Connection from 217.129.26.193 closed
