
Subject: NST not filtering for exchange 5.5

Hey all, I have a small problem that has turned big, I recently downloaded and installed the SMTP No spam today program on an exchange 5.5 server for roughly 5 addresses. I followed the white paper directions, shutting down the SMTP services, and the exchange internet mail, reconfigured the port exchange listens on, ran the SMTP admin wizard and set the incoming to my email server, port 25, and outgoing the same server port 26 (per the instructions). I left pretty much everything else the same as the default, aside from changing the message when it is bounced, I left it blank. It went through its check and restarted the SMTP process, and itself, and I in turn restarted Exchange internet services. It has been running for ~12 days now, and as of yet not one piece has been considered "spam" by the program, yet I know it is somewhat checking them due to the disclaimer at the bottom stating "checked by No Spam Today"

Is there some other setting I am missing? I have it set to switch or add to the title the default "Rated Spam by No Spam Today"

Any help is greatly appreciated,
Thanks in advance,
Ben
