I love the new version of NST.

I think that the report tab could be more useful if:

1. you could double click on a line and get more information about why it was blocked.
2. you were able to add the address to the white or black list by right mouse clicking and having a menu come up with these options.
3. you were able to copy a selected part of the report to be emailed or placed into a word document.

i hope i did not repeat other suggestions. Let me know what everyone thinks

Also the report tab, would be much more helpfull, if zou could filter either by receipient or by sender.

Every admin know the scenario: a user call the IT and complains, I am expecting an email from such and such. Where is it?

Regards

Markus

Agree with all these requests.

Cheers, Rob.

You can sort the list by sender or recipient, this way it should be fairly easy to find a name by using the slider to the right.

To sort, click the column header.
