FYI - Spamlogs for NST does not work properly with NST version 3, spamlogs will NOT output the subject line of any messages either to the screen, or to CSV. I have contacted NST and the code author with this information. Apparently NST Version 3 outputs the subject as its own line, where in version 2 and prior, it was output as part of the attachment filter. This change has caused spamlogs to output log files with missing subject lines.

Any updates on this? This is still an issue for me, users need a good way to parse the NST log file in a readable format for reporting and troubleshooting.

I'm back working on the spamlogs, etc. I've been out of commission for a while fighting some health issues. Then visiting relatives, etc. I've installed NST v3 and will start testing and feed back the corrections to spamlogs asap.
