I have running a batch file using the IMAP2Mbox.exe process for a long time now and it always worked smoothly. Recently, I started getting the following error message:

IMAP login failed: 1 NO A required privilege is not held by the client

Attached are the contents of the batch file I use and the spam.cfg file.

```
del spam.mbox
```

```
echo *===* >> spam.log
```

```
imap2mbox.exe --mbox=spam.mbox --folder=SPAM --config=spam.cfg --username="" --pass=""  
--server=--path="Public Folders/" --debug --verbose >> spam.log
```

```
if exist spam.mbox sa\sas-learn -C sa\ruleset --showdots --spam --mbox spam.mbox >> spam.log
```

```
sa\sas-learn -C sa\ruleset --showdots --force-expire >> spam.log
```

```
sa\spamassassin -x -C sa\ruleset --lint >> spam.log
```

CFG file contents:

[Server]

Name=

Port=143

[User]

Name=Magic=

[Public Box]

Path=Public Folders/

Folder=SPAM

[Output]

Mbox=spam.mbox

[Options]

Verbose=1

Delete=0

Timestamp=

This problem has been resolved. It was a problem with user rights to the exchange mailbox used to run the process. Thanks!!
