I'm wondering if there is any way to customize the readout of the X-Spam Status header when NST/SA flags an email as spam. I'd like to replace the short "code" name for the test with a longer, more descriptive name.

You could try adding your own header, and define it as needed. There is a list of placeholders/tags you can use in headers described in the SpamAssassin docs. Maybe `_REPORT_` will do what you want.
