Hi! We get a lot of emails with Netsky and Bagle virus attachments. The McAfee Groupshield replaces the attached file however the email still gets through.

How create a rule blocking emails with "Re:" as the only content of the subject line? Should I put this in local.cf?

Thanks!

Wouldn't it be easier to configure GroupShield to do this?

If not, see if GroupShield adds some information about what happened in the mail headers, then add a header rule to discard this mail. I think there are some examples of header rules here in the forum, or check the SpamAssassin Wiki:

<http://wiki.apache.org/spamassassin/>

or the rule writing howtos here:

<http://www.rulesemporium.com/>
