Hi!

Is there a logfile that I can create that can tell me how many spams were detected so far by each SpamAssassin rule?

I want to know that so I will disable the least effective rules and save server resources and I will be able to know what types of spam are the most common here.

Thanks

Yuval Khalifa

The information you are looking for is contained in the nospamtoday_statistics.csv file (to be found in the installation directory).
