Can anyone direct me to where i can find info as to how to create a spam assassin rule. I use to host a Merak/Icewarp mail server. but since have let someone else host, but they do not provide me the same level of spam protection. I'm strting to use "No Spam Today", and would liekt o port some of my regular expression filters i created for my other mail server to spam assassin rules. or if someone can convert this expression to a span assassin file. I would be abel to compare the 2 and see what was done.

one example is

```
[vV].{0,2}[il].{0,2}[aA].{0,2}[gG].{0,2}[rR].{0,2}[aA]
```

Thanks,
