Hello all,
first time on the forum, and i am looking for some helpful information.

our company is getting en-mass a lot of spam in the form of

Picture (which is embedded into the email)

Mass amount of random text at the end.

i have spend DAYS training spam filter to pickup these messages etc and it never seems to stop them is it possible to stop them? i can provide a sample of the email or a screenshot on request if needed.

any help would be appreciated.

Thanks
kris

You should be able to adjust the rules for NST and Spamassassin to filter most of them out.

Hello,

has anyone been able to provide instructions on this yet? as i am still getting a lot of junk mail coming through and not sure how to configure NST to sort it

Did you you update to the last version ? (2.3.5.3)

There where some Sare-Rules added, which are sorting out those "embedded picture mails" ?

Then you should maintain your bayes database. (If you use it, if not you should)

Are you learning HAM and SPAM, without any error messages ?

Can you run expire.bat ?

Sometimes the bayes database is corrupt or poisoned. So, bayes is returning bad values.

You can delete the database and build up a new one.

If you delete it,

it takes some X00 Mails then bayes scoring will run again.

(First it has to sample X00 Mails, then scoring starts)

While learning SPAM you can watch the bayes Score going up for particular unwanted mails.
