Is sa-update on NST working?

```
sa-update -D
```

```
[2192] dbg: logger: adding facilities: all
```

```
[2192] dbg: logger: logging level is DBG
```

```
[2192] dbg: generic: SpamAssassin version 3.1.7
```

```
[2192] dbg: config: score set 0 chosen.
```

```
[2192] dbg: util: defining getpwuid() wrapper using 'unknown' as username
```

```
Can't locate Mail/SpamAssassin/Locker/Win32.pm in @INC (@INC contains: C:\Perl\site\lib E:\IMail\No Spam Today!\sa) at (eval 156) line 2.
```

```
BEGIN failed--compilation aborted at (eval 156) line 2.
```

There is no mention (that I can find) of sa-update in the manual, and the included doc is apparently just a copy/paste from the Apache wiki.

We will look into it, and fix this problem in one of the upcoming releases.
