Dear all,

I got messages obviously listed as SPAM SERVERS and I need to add for example 5 points to total score if email arrives from such serves, please advice how to do that.

For example you can see positive tests for one of such emails. I need to eliminate such emails.

Thanks

V.

```
tests=DNS_FROM_RFC_ABUSE,  
GAPPY_SUBJECT,RCVD_IN_BL_SPAMCOP_NET autorelearn=disabled
```

Add lines like this to your local.cf file, using a text editor:

```
score DNS_FROM_RFC_ABUSE 5  
score RCVD_IN_BL_SPAMCOP_NET 5
```

However, some blacklists have lots of false positives, so be careful with this.
