Things have been going pretty well but now we're getting a lot of messages through with this kind of format..

Hi,

C i A L / S
L E V / T R A
A M B / E N
P R O Z & C
V / A G R A
S O M &
V A L / U M
X & N A X
M E R / D / A

They seem to be made up with HTML tables with each letter being in a cell and are typically getting a spam value of 0 or 1 - has anyone else experienced this / is there anything that can be done?

Thanks in advance...

Please teach those mails to the Bayes database.
See <http://www.byteplant.com/support/nospamtoday/howtolearnsam.html> for details.

I think there is also the possibility of using third-party rules in the ruleset directory, checkout <http://www.rulesemporium.com/> and their ruleset 70_sare_html*.cf
