Since the last Update Language Detection doesn't work at all anymore.

We switched on TextCat in v310.pre as we did after every update of nospamtoday! but language isn't detect any more.

Any clue?

Did you already run spamassassin in a commandline prompt with -D ?  
sa\spamassassin.exe -D -c sa\ruleset < samplemsg

I get the following error msg:

```
[768] dbg: plugin: loading Mail::SpamAssassin::Plugin::TextCat from @INC
```

```
[768] dbg: textcat: loading languages file...
```

```
[768] warn: plugin: failed to create instance of plugin Mail::SpamAssassin::Plugin::TextCat:  
textcat: cannot open languages: No such file or directory
```

Can you tell me what's wrong or missing?

Check if the sa\ruleset subdirectory contains a "languages" file.  
If this should not be the case, please contact [nstsupport@byteplant.com](mailto:nstsupport@byteplant.com).
