we are using the language guesses to determine russian mails. Since only a few of our employees speak russian, we delete can delete all russian mails addressed to the others.

Every update of NoSpamToday overwrites the setting in the v310.pre files, so the language guesses is turned off again.

Is there a way to pretend the update from doing this (like in case of the local.cf file)?

Thanks for your feedback.
We will address this issue in the next release after V2.3.3.4
