we have several user who receive russian mails but not all off them speak russian. we want to delete all russian mails to users who don't speak russian.

Now my question:

How do I define the rule so that only russian speaking employees get russian mail?

As an alternativ it would be sufficient to us to tag a mail with the detected language. We have another server process behind the nospamtoday server, which could react on this flag and the dedicated user.

Just add `_LANGUAGES_` to the subject tag (configurable in the SpamAssassin Filter). See http://spamassassin.apache.org/full/3.0.x/dist/doc/Mail_SpamAssassin_Conf.html for more information.

do I have to set

ok_languages

to something other than "all"?

If I leave it to "all" the language tag is always blank. If I set it to "en de" for example it works.

But since we are an internationally operating company I don't really want to block other languages. Any idea?

I suggest to configure the

ok_languages

setting to match all languages that are spoken by the mail recipients in your company.
