Hi all,

any ideas, how i can get the Sober.P (WM-Mail) generated Nazi-Mails filtered ?
even though i had NST learn almost any of them, they still keep coming in.
Quite embarassing.
Any ideas ?
Thanks in advance.
Markus

We learned some 250 messages this morning, and it seemed to work for us, with only a few of these messages occasionally getting through. The auto-whitelist can be a problem, reducing scores unnecessarily until the bonus has worn off.

Google found me a ruleset that might also help:

<http://mailscanner.prolocation.net/german.cf>

How would you go about applying this german.cf in nospamtoday. I've put the file into sa/ruleset. then I tried this: `sa\spamassassin.exe -x -c sa\ruleset -D < >out 2>err`

but the score is always the same. Am I doing this wrong. I have tried making nospamtoday learn from the messages but they are still coming through.

By all accounts this should work. Was the message in RFC-822 format? How did you collect this sample message? Did you use a mail storage filter, or a mail client capable of exporting mail messages in RFC-822 format (Outlook won't do!)?

I copied that file into sa/ruleset and restarted the service.. it's catching them all.

@itchy:

Check the name of the ruleset "german.cf". Does it end with ".cf"?
I had to rename it first from "german.cf.txt" to "german.cf" after downloading.

That's because you edited it in Notepad, I'll bet..
